- Social Media Action Analytics -
 - What Is Actions Analytics?
 - Common Social Media Actions
 - Actions Analytics Tools

Actions in Social Media :

- Actions are the **cash cow of social media**.
- It is what the users do on social media that matters most to social media marketers.
- Typical actions performed by social media users include **likes, dislikes, shares, views, clicks, tags, mentions, recommendations** .
- Actions are way to express symbolic reactions to social media content.
- Social media actions are social expressions

WHAT IS ACTIONS ANALYTICS?

- Social media actions analytics deals with extraction, analysis, and interpretation of the insights contained in the actions performed by social media users.
- Social media actions are of great value to social media marketers because of their role in increasing revenue, brand value.
- Organizations can employ actions analytics to measure popularity and influence of a product, service, or idea over social media.
- For example, a brand marketer might be interested to know how popular their new product is among social media users.
- Analyzing the Facebook likes and Twitter mentions, may provide an answer to this.

Need for Social Media Action Analytics

- Social media action analytics is the **process of analyzing and interpreting the actions performed by social media users**, such as **likes, shares, and mentions**, in order to understand and optimize the effectiveness of social media campaigns and strategies.
- This analysis can be used to **identify trends, measure the impact of social media content, and inform decision-making** about future social media efforts.
- Social media action analytics can **help businesses and organizations understand how their social media presence is perceived and engaged with by users**, and can **provide insights** into the effectiveness of their marketing and communication efforts on social media platforms.

Common Social Media Actions

- LIKES
- DISLIKES
- VIEWS
- VISITORS,VISITS,REVISITS
- CLICKING
- MENTIONS
- TAGGING
- HOVERING
- PINNING
- CHECKING
- EMBEDS
- UPLOADING AND DOWNLOADING
- ENDORSEMENT

Common Social Media Actions

- **LIKES**

- The "Like" button is a feature on social media sites that allows **users to express their positive feelings towards certain products, services, people, etc.** The "Like" button is often incorporated into social media platforms and websites and the number of likes received by content is often displayed.

- **DISLIKES**

- The "Dislike" button on social media platforms such as **YouTube allows users to express their negative feelings towards certain content.** This feature is visible to others and the number of dislikes is accumulated over time.

- **SHARE**

- "Share" buttons allow users to **distribute content on social media platforms to other users.** This can be used by businesses to increase website traffic by directing visitors from social media sites.

- **VISITORS, VISITS, REVISITS**

- A visitor is a person who visits your website or blog. A single visitor may visit a page or content one or more times (revisits). Visits are also known as sessions. Other related concepts are:
- **Unique visitor**—A person who arrives at your page first time.
- **Average bounce rate**—the percentage of visitors who visit a website and leave the site quickly without viewing other pages.
- **Session Duration**—The average duration of a visit or session.

- **VIEWS**

- Views are the number of times social media content is viewed by users.
- Page views are the number of times a page on a company website or blog is viewed by a visitor.
- View data can be used to understand user engagement and popularity of content.

- **CLICKS**

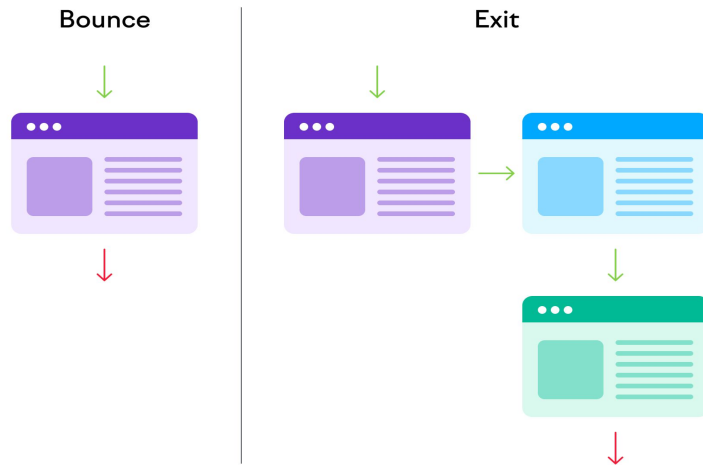

- Clicks are actions performed by users when they click on hyperlinked content on a website or blog.
- Click data can be used for business intelligence purposes, such as improving website traffic and reducing bounce rate.

Key Difference (One Sentence)

Bounce = user leaves **immediately without interaction**,

Exit = user interacted but **left at the end of a session or journey**.

Bounce vs. Exit

Bounce rate Vs Exit

Insight Type	Bounce Helps Measure	Exit Helps Measure
Engagement Quality	Whether content attracts attention	Where content stops being compelling
Campaign Relevance	If messaging is aligned with audience intent	How far users progress in interaction funnel
Optimization Strategy	Improve thumbnails, targeting, headlines, first CTA(Click to Action)	Improve deeper engagement, content depth, CTA clarity

- **Clickstream analysis** can be used to **report user behavior on a specific website, such as routing, stickiness (a user's tendency to remain at the website), where users come from and where they go from the site.**
- It can also be used for more aggregate measurements, **such as the number of hits (visits), page views, and unique and repeat visitors, which are of value in understanding how the website operates from a technical, user experience and business perspective.**
- Clickstream analysis can **help retailers gain a better understanding of the habits, preferences, and shopping patterns of specific customer groups.**
- Clickstream data are **a detailed log of how participants navigate through the Web site during a task.** The log typically includes the **pages visited, time spent on each page, how they arrived on the page, and where they went next.**

- **MENTIONS**

- Mentions or social mentions refer to the **occurrence of a person, place, or thing being mentioned by name on social media.**
- Social mentions are **social posts that include a reference to your brand.** This includes posts in which your brand is tagged (often referred to as @mentions) or simply mentioned by name in the caption
- They can **indicate the popularity of a person, place, or thing and can be used to gauge the success of a product, service, or campaign.**
- A Twitter mention is the inclusion of a "@username" in a tweet.

- **TAGGING**

- Tagging is the **act of adding extra information to social media content for identification and classification purposes.**
- It can take various forms, such as attaching **descriptive keywords to posts or adding tags to photos and comments on Facebook.**
- Social bookmarking services allow users to organize their bookmarks by adding descriptive tags, a practice known as collaborative or folksonomic tagging.
- **Tagging fastenss the process of searching and finding relevant content.**

- **HOVERING**

- Hovering is the act of moving a cursor over social media content.
- Capturing hovering data can help **understand user behavior on a social media site.**
- Hovering over an ad can be considered as a proxy for attention, and **there may be a strong correlation between hover time and purchases.**
- Hovering data has traditionally been used in website design and user experience improvement.

- **PINNING**

- Pinning is an action performed by social media users to **pin and share interesting content (such as ideas, products, services, and information) using a virtual pin- board platform.E.g. Pinterest, Tumblr, StumbleUpon, or Digg.**

- **CHECK INS**

- Check-in is a feature on social media platforms that **allows users to announce and share their location.**
- The location of the user is determined using **GPS technology.**
- Check-in data can be used to offer **location-based services and products.**

- **EMBEDS**

- Embedding is the act of incorporating social media content (e.g., a link, video, or presentation) into a website or blog. An embed feature lets users embed interesting content into their personal social media outlets.

- **ENDORSEMENT**

- Endorsement is a features of social media that lets **people endorse and approve other people, products, and services. For example, LinkedIn lets user endorse the skills and qualifications of other people in their network.**

- **UPLOADING AND DOWNLOADING**

- Uploading is the act of adding new content (e.g., texts, photos, and videos) to a social media platform. The opposite of uploading is downloading; that is, the act of receiving data from a social media platform

Action Analytics Tools
